

Water as Habitat Episode 1

Male or Female? Sea Turtles

Module 3: Population Discussion

Module 3 Overview:

On the following 2 pages, there are classroom “Twitter” templates that can be used to create a bulletin board or used as handouts in the classroom to facilitate a discussion. This is an engaging way to have students respond to a prompt and have peers comment on each other’s thoughts. Have them be creative and color their profile picture, etc...

- Have students write a tweet to the following prompt on the template.
 - A tweet is a short response or comment that consists of 140 characters or less.

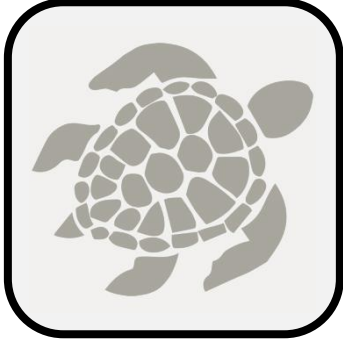

If 95% of the sea turtle hatchling populations are female and that number is on the rise, what will happen to the population over time?

- Have students read the following article after they have watched the [Male or Female? Sea Turtles](#) Video and written their tweet to the prompt above.
 - <http://thinkprogress.org/climate/2014/05/20/3439500/sea-turtles-sex-ratios-and-climate-change/>
- Allow time for students to comment and reply to other students’ hypotheses, provide ideas feedback, and offer ideas to help reverse the population shift and protect sea turtle populations.
